## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of invention group I comprising claims 17 – 19, 21, 23 and 25 in the reply filed on 7/15/2004 is acknowledged.

Claims 20, 22, 24 and 26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/15/2004.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 17 – 19, 21, 23 and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Regarding claims 17 and 21, the methodologies recited by these claims appear to be incomplete with respect to the control of the sensor. The claim preambles recite that the method is directed to a methodology for controlling a gas concentration sensor. However, it is unclear as to what aspect of the

Art Unit: 1743

sensor is being controlled. How is the detected impedance related to the control of the sensor? Is a heating element or sensor temperature involved in the control of the sensor?

***Allowable Subject Matter***

Claims 17 – 19, 21, 23 and 25 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Kato et al. teach a gas measuring system which makes it possible to suppress variation in detection output brought about depending on the temperature of a measurement gas, and which makes it possible to realize a high signal-to-noise ratio of the detection output. Kurokawa et al. teach limiting-current type gas concentration measuring apparatus, which is designed to compensate for errors in determining gas concentration. Pursifull et al. teach a heated exhaust gas sensor incorporating the use of an impedance detection and evaluation methodology in sensor control.
